

4B. IT SECURITY

Certified Network Penetration Tester

- 1 Cyber Ethics
 - 1.1 What is Hacking?
 - 1.2 Who is a Hacker?
 - 1.3 Who is an Ethical Hacker?
 - 1.4 What is Cracking?
 - 1.5 Who is a Cracker?
 - 1.6 Types of Hackers

- 2 Establishing the Base**
 - 2.1 What is Information Security?
 - 2.2 Information Security Goals
 - 2.3 Five Principles to Remember
 - 2.4 TCP/IP Stack Review
 - 2.5 Network Security Basics
 - 2.5.1 IP Address
 - 2.5.2 MAC Address
 - 2.5.3 Client & Server
 - 2.5.4 Web Server
 - 2.5.5 DNS Server
 - 2.5.6 Network Devices

- 3 Footprinting**
 - 3.1 What is Footprinting?
 - 3.2 Why is Footprinting Necessary?
 - 3.3 WHOIS lookup
 - 3.4 DNS Enumeration
 - 3.5 DNS Interrogation
 - 3.6 Network Reconnaissance
 - 3.7 Footprinting Tools
 - 3.7.1 Whois lookup, Wikto
 - 3.7.2 Online Tools – Samspace, What is MyIP
 - 3.7.3 DNS Enumerator – nslookup
 - 3.7.4 Traceroute – Neo Trace, VisualRoute
 - 3.7.5 Tracing Emails – VisualRoute Mail Tracer, eMailTracker Pro

- 4 Scanning**
- 4.1 Determining if the System is Alive
- 4.2 Determining which Services are Running or Listening
- 4.3 Scan Types
- 4.4 Identifying TCP and UDP Services Running
- 4.5 Windows-Based Port Scanners
- 4.6 Port Scanning Breakdown
- 4.7 Daemon Banner Grabbing
- 4.8 Firewall Detection
- 4.9 Detecting the Operating System
- 4.10 Active Stack Fingerprinting
- 4.11 Passive Stack Fingerprinting

- 5 Maintaining Anonymity**
- 5.1 Proxy Servers
- 5.2 Anonymizers
- 5.3 Proxy Chaining- The Onion Routing (TOR)

- 6 Enumeration**
- 6.1 Enumerating Remote Maintenance Services
- 6.2 Enumerating Remote Information Service
- 6.3 Enumerating Web Servers
- 6.4 Enumerating Database Services
- 6.5 Enumerating Mail Services
- 6.6 Enumerating Windows Networking Services
- 6.7 Tools- Nbtstat, Httprint, Wikto, Brutus, RpcScan

- 7 Google Hacking**
- 7.1 Using google as a hacking tool
- 7.2 Google Searching with Advanced Operators
- 7.3 Directory Listings
- 7.4 Directory Traversal
- 7.5 Extension Walking
- 7.6 Network Mapping
- 7.7 Locating Vulnerable Targets
- 7.8 Searching for Usernames, Password & Secrets
- 7.9 Google Hacking Database (GHDB)
- 7.10 Tools- Site Digger, Google Hacks

- 8 Vulnerability Assessment**

- 8.1 What are Vulnerabilities?
- 8.2 Categories of Vulnerabilities
 - 8.2.1 Local
 - 8.2.2 Remote
- 8.3 Types of System Vulnerabilities
 - 8.3.1 Memory safety violation
 - 8.3.1.1 Buffer Overflow
 - 8.3.1.2 Heap overflow
 - 8.3.2 Input validation errors
 - 8.3.2.1 Format String
 - 8.3.2.2 SQL injection
 - 8.3.2.3 Code injection
 - 8.3.2.4 E-mail injection
 - 8.3.2.5 Directory traversal
 - 8.3.2.6 Cross-site scripting in web applications
 - 8.3.2.7 HTTP header injection
 - 8.3.2.8 HTTP response splitting
 - 8.3.3 Privilege-confusion
- 8.4 Scanning Tools- Superscan, Xprobe, Netcat, TOR, Nmap, GFI Languard, Nessus

9 Exploitation

- 9.1 Sniffing and ARP poisoning
- 9.2 Extracting and Cracking Passwords
- 9.3 Man-In-The-Middle Attack
- 9.4 Exploiting Network Services with Metasploit Framework
- 9.5 Privilege Escalation
- 9.6 Gaining Access to Remote Control
- 9.7 Maintaining Access to the Compromised Machine
- 9.8 Executing Applications
 - 9.8.1 Key Loggers
 - 9.8.2 Spywares
 - 9.8.3 Trojans and Backdoors
- 9.9 Hiding and Covering the Tracks
- 9.10 Tools- Wireshark, Cain and Abel, Hydra, John the Ripper, Metasploit, VNC, Fpipe

10 Wireless Attacks

- 10.1 Introduction to Wireless Technology
- 10.2 Wired Network vs. Wireless Network
- 10.3 Types of Wireless Network
- 10.4 Types of Wireless Standards

10.4.1	802.11
10.4.2	802.11a
10.4.3	802.11b
10.4.4	802.11g
10.4.5	802.11n
10.5	Terminology in Wireless Networks
10.5.1	MAC Address
10.5.2	WAP
10.5.3	SSID
10.5.4	Beacon frame
10.5.5	Channel
10.6	Security Options in WLAN
10.6.1	MAC Filtering
10.6.2	WEP Key
10.6.3	WPA & WPA2 Keys
10.7	Hacking a WLAN
10.7.1	Terminologies
10.7.1.1	War Driving
10.7.1.2	War Flying
10.7.2	MAC Spoofing
10.7.3	WEP Cracking
10.8	Steps to Hack a WLAN
10.8.1	Finding the Network
10.8.2	Capturing IVs
10.8.3	Using IVs to Decrypt the Key

11 Web Application Hacks

11.1	The Need for Application Security
11.1.1	Case Studies
11.1.2	Web Hacking Statistics
11.1.3	Security Myths
11.1.4	Measurable Benefits
11.1.5	Application Security Challenges
11.2	Application Security Essentials
11.2.1	Goals of Application Security
11.2.2	Traditional SDLC Vs Secure SDLC
11.2.3	Application Security Approach
11.2.4	Secure Application Design Principles
11.3	OWASP Top 10
11.3.1	What is OWASP?

- 11.3.2 OWASP Top 10 Vulnerabilities and Countermeasures
- 11.4 Attacking Authentication
 - 11.4.1 Weak Authentication
 - 11.4.2 Brute-Force Attacks
 - 11.4.3 Exploiting Authentication – Live demonstration against a sample application
 - 11.4.4 Countermeasures To Stop Authentication Attacks
- 11.5 Attacking Authorization
 - 11.5.1 Broken Authorization
 - 11.5.2 Attacking Broken Authorization – Live demonstration against a sample application
 - 11.5.3 Preventing Authorization Attacks
- 11.6 Attacking Session Management
 - 11.6.1 Session Fixation Attacks
 - 11.6.2 Cookie Poisoning/Manipulation
 - 11.6.3 Attacking Poor Session Management – Live demonstration against a sample application
 - 11.6.4 Preventing Session Management Attacks
- 11.7 Injecting Code
 - 11.7.1 Buffer Overflow - Live demonstration against a sample application
 - 11.7.2 HTML Injection – Live demonstration against a sample application
 - 11.7.3 Cross -Site Scripting (XSS) Attack – Live demonstration against a sample application
 - 11.7.4 SQL Injection – Live demonstration against a sample application
 - 11.7.5 OS Command Injection – Live demonstration against a sample application
 - 11.7.6 Countermeasures
- 11.8 Error Handling/ Information Leakage
 - 11.8.1 Exploiting Poor Error Handling – Live demonstration against a sample application
 - 11.8.2 Preventing Information Leakage
- 11.9 Logging
 - 11.9.1 Insecure Logging – Live demonstration against a sample application
 - 11.9.2 Logging Best Practices
- 12 Social Engineering Attacks**
 - 12.1 Email Attacks
 - 12.2 Browser Based Attacks
 - 12.3 Software Targeted Attacks

Benefits

The Course educates participants on:

- ✓ The Methodology used to perform penetration testing
- ✓ How to compromise systems security
- ✓ How to utilize tools to exploit vulnerable systems

- ✓ How to apply countermeasures to protect an organization from exploitation

Target Audience

Windows administrators, UNIX/Linux administrators, Desktop Engineers, Network Engineers, IT Managers, other professionals who want to exploit & defend their network.

Mandatory Pre-requisites

The prospective participant should:

- ✓ Be familiar with both Windows and Linux operating systems
- ✓ Have an understanding of TCP/IP

Helpful Pre-requisites

Knowledge of Networking Protocols

Duration

12 Days
